#### Table 4: General Information

## 2 **Project Location**

#### 2.1 Province: North khorasan

### 2.2 The County: Shirvan

Shirvan is a city and capital of Shirvan County, North Khorasan Province, Iran. The history of Shirvan is more than 7000 years old, as archaeologists found some graves in Gelian an Khanlogh (Villages of Shirvan) which are related to Achaemenid Empire era. The city has been significant industrially with sugar beet factories. It is also significant historically (Nader hill), geographically (Honame), and anthropologically (caves around the city).

This project will be construct in part 267, 268 with coordinates (4134815,590893) in shirvan industrial park. Proposed location of project is shown in Figure 1.

Figure 1: Location of Proposed Land in Shirvan Industrial Park

# 2.3 The Project: The Dried Fruit

## 2.4 Access to the Infrastructures

| No. | Needed Infrastructures     | Distance to the Project | The Supply Infrastructures |
|-----|----------------------------|-------------------------|----------------------------|
| 1   | Water                      | 0                       | is provided                |
| 2   | Electricity                | 0                       | is provided                |
| 3   | Gas                        | 0                       | is provided                |
| 4   | Telecommunications         | 0                       | is provided                |
| 5   | High way                   | <1 km                   | is provided                |
| 6   | Sub way                    | 0                       | is provided                |
| 7   | Airport                    | 74                      | is provided                |
| 8   | Amirabad Port (Behshahr)   | 491                     | is provided                |
| 9   | Bandar Abbas Port          | 1,559                   | is provided                |
| 10  | Rail way station of Joveyn | 236                     | is provided                |
| 11  | Rail way station of Jajarm | 266                     | is provided                |

## **3** Technical Specifications of Plan

#### 3.1 Product

| The Project     | ISIC Code                              | Customs Tariff | Environmental Category |
|-----------------|--|----------------|------------------------|
| The Dried Fruit | 1513412363<br>1513412380<br>7495421409 | 08135000       | 1                      |

Table 6: Project Specifications Based on ISIC Code

In this project, all the materials related to the study of the processed dried fruits market especially domestic and foreign supply and demand, are examined. The necessity of implementing this project can be examined from several aspects. The first aspect is the abundance of raw materials, ie fruits, at the project site and neighboring provinces (Razavi and South Khorasan). The high volume of fruit production in the orchards of Khorasan province and their sale in bulk and the very low price of bulk buyers is a big challenge that in these circumstances has increased the need for packaging of dried fruits. The second aspect is related to manpower. Although unemployment rates in North Khorasan Province are relatively favorable, but the presence of a large number of skilled workers and workers can be a very valuable opportunity to set up a production line and packaging of dried fruit that does not require much skilled labor. Taking advantage of this opportunity to prevent the migration of the province's labor force at this time is very necessary. According to studies on the production of processed dried fruits, it is predicted that between 2021 and 2025, the need for their construction will increase, which will reassure new investors. Also, the amount of demand will increase by about 60,000 tons from 2020 to 2023, which considering the capacity of factories with progress (above 75%), the country's need by 2023 is about 40,000 tons. It should be noted that the capacity of this factory is 700 tons, so from the perspective of the country's needs, there is no need to worry about the construction of this factory. From the provincial point of view, there are currently two factories with a capacity of 200 tons (Maneh & Samalghan 50 tons and Bojnourd 150 tons), so due to the existence of fruits in North Khorasan province, this capacity can be increased to at least 1,000 tons (on According to the information of the Jihad and Agriculture Organization of the province), therefore, North Khorasan province has a minimum production capacity of 800 tons more. Since the capacity of this factory is 700 tons, from the provincial point of view, the factory can be built without any worries by supplying raw materials.

## 3.2 Project's Requirements

Quality control related to this product will be done in two steps. In the first step, quality control is related to input materials. In the next step of quality control, it is related to the taste of processed dried fruits and in the last step, quality control is related to the quality of packaging.

Product standards: National Standard Organization of Iran for mixed dried fruits - Features and test methods with number 14342, types of processed dried fruits and dried fruits sampling method with number 1036, Dried fruits - Sulfur anhydride measurement method with standard number 569 defines that relevant standards must be met for each aspect of the work.

## 3.3 Space and Infrastructure Required

| Specifications                       | Area $(m^2)$ | Price per $m^2$ | Cost      |             |       |
|--------------------------------------|--------------|-----------------|-----------|-------------|-------|
|                                      |              |                 | Paid Cost | Needed Fund | Total |

• Number of skilled personnel required: 13

- Number of non- skilled personnel required: 4
- Total number of personnel required: 17

# 4 Market Study and Competition

# 4.1 Examining Supply And Demand Trends

The amount of domestic supply or production of dried fruit based on production licenses (according to the information of the ministry of industry, Mine and Trade from 2015 to 2020) is as follows:

| Year | Nominal Capacity (Tons) |
|------|-------------------------|
| 2015 | 26,046                  |
| 2016 | 33,252                  |
| 2017 | 62,845                  |
| 2018 | 80,738                  |
| 2019 | 116,463                 |
| 2020 | 134,875                 |

Table 14 : The Amount of Domestic Supply of Dried Fruit

The following chart shows the estimation of production accoding to the Table 14 by 2025 baesd on linear regression.

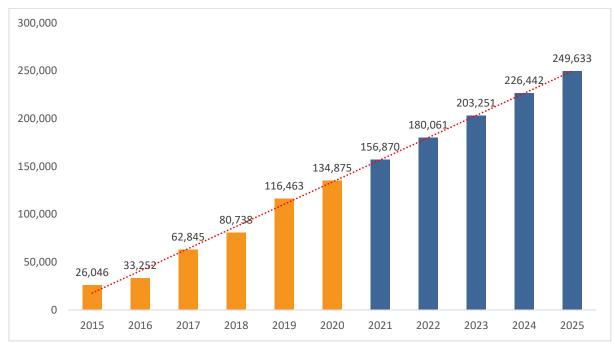

Figure 2: The Estimation of Production

The amount of imports to the country based on information from the Tehran Chamber of Commerce, Industries, Mines and Agriculture at <u>http://www.tccim.ir</u> and Customs Tariff Code 08135000 was around zero during the years 2015 to 2018.

The amount of exports from the country is based on the information of the Tehran Chamber of Commerce, Industries, Mines and Agriculture at <u>http://www.tccim.ir</u> is presented in Table 15 (There is no data for 2019 and 2020 so the information is considered as the initial data for the prediction of next years).

| Year | Customs Tariff | Export (Tons) | Countries                             |
|------|----------------|---------------|---------------------------------------|
| 2015 | 8135000        | 769           | India 23%, Canada 15%, Pakistan 10%   |
| 2016 | 8135000        | 1,802         | Pakistan 62%, Bahrain 7%, England 6%  |
| 2017 | 8135000        | 1,042         | Turkey 24%, England 14%, Pakistan 14% |
| 2018 | 8135000        | 1,597         | Turkey 40%, Canada 14%, England 9%    |

Table 15: The Amount of Export Between 2015 and 2018

The following chart shows the prediction of exports according to the Table 15 up to 2025 basde on linear regression.

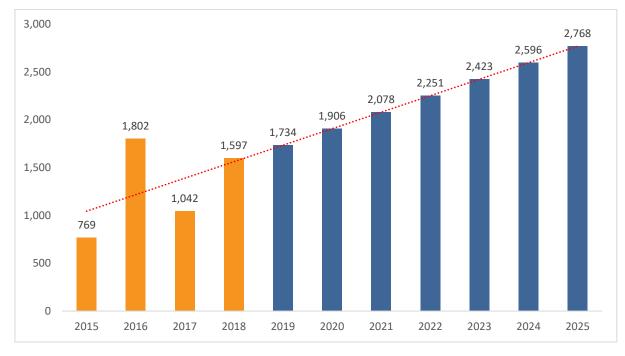

Figure 3: The Prediction of Exports

### Export predictions from 2021 up to 2025 are presented in the Table 16

| Table 16: The Prediction of Exports up to | 2025 |
|---|------|
|---|------|

| Year | The Prediction of Export |
|------|--------------------------|
| 2021 | 2,078                    |
| 2022 | 2,251                    |
| 2023 | 2,423                    |
| 2024 | 2,596                    |
| 2025 | 2,768                    |

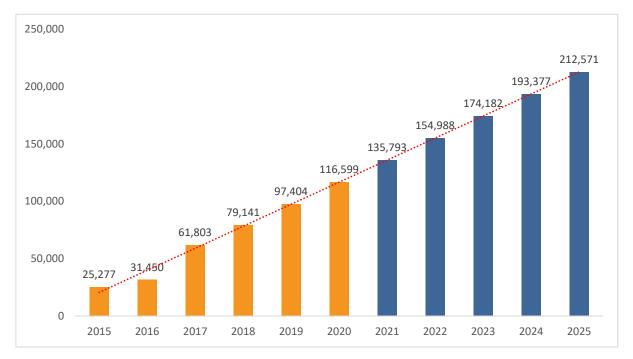

As the Figure 3 and Table 16 shows, product exports are ascendant from 2021 up to 2025, so factories that are exploited at this time can invest in the foreign market or the same export.

The amount of domestic demand that is equal to the amount of domestic production plus the amount of imports minus the amount of exports, is presented in Table 17.

| Year | The Domestic Demand (tons) |
|------|----------------------------|
| 2015 | 25,277                     |
| 2016 | 31,450                     |
| 2017 | 61,803                     |
| 2018 | 79,141                     |

 Table 17: The Domestic Demand from 2015 up to 2018

Table 18 shows the amount of domestic demand according to the Table 17 by 2025 based on the linear regression.

As the Table 18 shows the domestic demand of the dried fruit is increased.

In Table 19, the information of the units that have obtained lisence is provided based on the amount of progress percent (according to the information of the Ministry of Industry, Mine and Trade).

| Progress Percent | Capacity (Tons) |
|------------------|-----------------|
| 0% - 25%         | 121,430         |
| 25% - 50%        | 2,850           |
| 50% - 75%        | 47,345          |
| 75% - 100%       | 17,040          |

Table 19: The Amount of Progress Percent that have Obtained Lisence

As the Table 18 shows, demands are up until 2025. It is worth mentioning that the factory's capacity is 700 tons, so it can be claimed that the factory can be established without the concern of selling the product.

# **5** Financial Projection

### 5.1 The Cost Estimate

#### Table 20:Total Investment (Million Rial)

| No. | Subject          | Cost    |  |  |

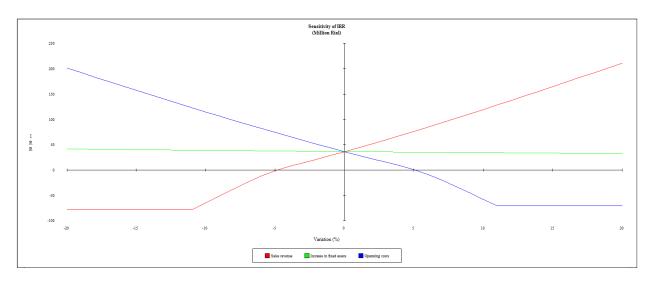

Figure 4: Sensitivity Analysis of IRR

# 6 Duration of Project Operation

The time of doing early stages and completing its process is about 14 months. Table 26 shows action plan and implementation schedule.

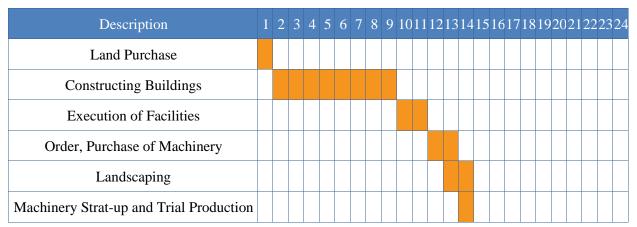

Table 26: Action Plan and Implementaion Schedule

## 7 Incentives, Features And Advantages of Project

North Khorasan Province is a province located in northeastern Iran. Bojnord is the capital of the province. This province contains many historical and natural attractions, such as mineral water springs, small lakes, recreational areas, caves and protected regions, and various hiking areas. Advantages of the agriculture of this province involves favorable and diverse climatic conditions and other parameters affecting growth.
